

Observed surfaces: local ownership and rigid edits

Combined study · native Blender 5.1.2 · fixed review camera · CPU Cycles

Before · observed B0 regions

After · desk translation / chair rotation

12 + 8 explicitly selected faces transferred; desk +0.25 m X / -0.10 m Y; chair 32° about world Z.

Holes and residual surfaces remain visible. This verifies editing and export, not complete-object recovery.
